## Common Information about the Journal A&SE

**Chief Editor – Professor Vadim A. Zhmud**, Head of Department of Automation in Novosibirsk State Technical University (NSTU), the Vice-Director of Novosibirsk Institute of Program Systems (NIPS). **Novosibirsk, Russia** E-mail: [oao\\_nips@bk.ru](mailto:oao_nips@bk.ru)

### Editorial Council:

- Vadim A. Zhmud** Chief Editor, Head of Department of Automation in Novosibirsk State Technical University (NSTU), the Vice-Director of Novosibirsk Institute of Program Systems (NIPS). **Novosibirsk, Russia**
- Galina A. Frantsuzova** Deputy Editor-in-Chief, Deputy Chairman of the Editorial Board, Professor of the Automation Department of the Novosibirsk State Technical University (NSTU), **Novosibirsk, Russia**
- Alexander V. Liapidevskiy** Director of Novosibirsk Institute of Program Systems (NIPS), Ph.D., **Novosibirsk, Russia**
- Uranchimeg Tudevtagva** Professor of Mongolian State University of Science and Technology Honorable Doctor of NSTU. Ulaan Baator, **Mongolia**
- Lubomir V. Dimitrov** Vice-Rector of Technical University of Sofia, Doctor, Honorable Doctor of NSTU, Professor, Sofia, **Bulgaria**
- Aleksey V. Taichenachev** Director of Institute of Laser Physics SB RAS, Doctor of Phys. and Mathemat. Sci., Professor, Corresponding Member of Russian Academy of Sciences, Member of the Presidium of the Higher Attestation Commission, **Novosibirsk, Russia**
- Eric Halbach** D.Sc. (Tech.), Tampere University of Technology, Laboratory of Automation and Hydraulics, P.O. Box 589, 33101 **Tampere, Finland**

### Editing Board:

- Anatoly S. Vostrikov** Professor, Department of Automation in NSTU, Doctor of Technical Science, Distinguished Lecturer of Russia, Academician of Academician of the International Academy of Higher Education, **Novosibirsk and Moscow, Russia**
- Nikolay D. Polyakhov** Professor, Doctor of Technical Sciences, Saint-Petersburg Electrotechnical University (ETU LETI), member of Editing Board of Journal “Electricity” (Elektrichestvo – in Russian), member of expert consil of Higher Attestation Consil RF. Saint-Petersburg, **Russia**.
- Vladimir I. Guzhov** Professor, Doctor of Technical Sciences, Department of Data Acquisition Systems in Novosibirsk State Technical University, **Novosibirsk, Russia**
- Siba S. Mahapatra** Professor in the Department of Mechanical Engineering, NIT Rourkela, **India**
- Hubert Roth** Head of the Department of Automatic Control Engineering of University of Siegen, Professor, **Germany**

- You Bo** Director of Institute of Robotics and Automation Technology, Dean of School of Automation, Professor, Harbin University of Science and Technology, **China**
- Jaroslav Nosek** Professor in Technical University of Liberec, Deputy Dean of the Faculty of Mechatronics, Computer Science and Interdisciplinary Research, Honorable Doctor of NSTU. Liberec, **Czech Republic**
- Petr Tůma** Professor at the Faculty of Mechatronics, Informatics and Interdisciplinary Education Technical University of Liberec, Doctor, **Czech Republic**
- Thierry Chateau** Full Professor, Université Blaise Pascal, Head of ISPR/ComSee Team, Clermont Ferrand, **France**.
- Wolfram Hardt** Vice-Dean on International Affairs, Director of University Computer Center, Professor on Technical Informatics, Technical University of Chemnitz, **Germany**
- Vimal J. Savsani** Associate Professor at B. H. Gardi college of engineering and technology, Surat, **India**
- Ravipudi Venkata Rao** B. Tech., M. Tech., Ph.D., D.Sc. (**Poland**). Professor, Department of Mechanical Engineering, Former Dean (Academics) and Head (Mech. Engg. Dept.) Sardar Vallabhbhai National Institute of Technology (SV NIT) {An Institute of National Importance of Government of India} Ichchanath, Surat-395 007, Gujarat State, **India**.
- Nematzhon R. Rakhimov** Head of the Laboratory of Optoelectronic Siberian State Geophysics Academy, Professor, Doctor of Technical Science, **Russia and Uzbekistan**
- Gennady P. Tsapko** Professor of the Department of Automation and Computer Systems of the National Research Tomsk Polytechnic University (TPU), Director of Research and Education Center of CALS-technologies, Professor, Doctor of Technical Sciences, Academician of the International Academy of Informatization, Tomsk, **Russia**
- Alexander M. Malishenko** Professor of the Department of Automation and Computer Systems of TPU, Doctor of Technical Sciences, Academician of the Institute of Higher School of Economics and the Academy of Electrotechnical Sciences of the Russian Federation, Tomsk, **Russia**
- Vadim Ya. Kopp** Head of the Department of Automated Instrument Systems in Sevastopol National Technical University, Honored Worker of Science and Technology, Professor, Sevastopol, **Russia and Ukraine**
- Alexander A. Voevoda** Professor, Department of Automation in NSTU, Doctor of Technical Science, Academician of International Academy of Sciences of Higher Education, Novosibirsk, **Russia**

- Eugeny V. Rabinovich** Professor, Department of Computer Science, NSTU, Doctor of Technical Science, Professor, Novosibirsk, **Russia**
- Michail G. Grif** Head of the Department of Automated Control Systems, NSTU, Doctor of Technical Science Professor, Novosibirsk, **Russia**
- Boris B. Borisov** Head of the Laboratory of the Institute of Laser Physics SB RAS (ILP SB RAS), Doctor of Technical Science, Novosibirsk, **Russia**
- Sergey L. Minkov** Head of the department of information support innovation Researching National University “Tomsk State University”, PhD, Physical and Mathematical Sciences, major researcher, Corresponding Member of International Academy of Informatization, Tomsk, **Russia**
- Boris V. Poller** Head of the Laboratory of the Institute of Laser Physics SB RAS (ILP SB RAS), Doctor of Technical Science, Novosibirsk, **Russia**
- Tatiana V. Avdeenko** Head of the Department of Economic Informatics NSTU, Professor, Doctor of Technical Science, Novosibirsk, **Russia**
- Bayardin Bat-Erdene** Deputy Director of Research and Innovation Energy Institute in Mongolian State University of Science and Technology, Ph.D. ass. Professor. Ulaan Baator, **Mongolia**
- Anatoly M. Korikov** Head of the Department of Control Systems in Tomsk University of Systems of Control and Radioelectronics (TUSUR). Professor, Doctor of Technical Science, Academician of International Academy of Sciences of Higher Education, expert in system analysis and automatics. Tomsk, **Russia**
- Vitaly S. Shcherbakov** Dean of the Faculty, “Oil and gas and construction equipment”, Head of Department “Automation of production processes and Electrical Engineering”, Doctor of Technical Sciences, Professor, Siberian State Automobile and Road Academy (SibADI), Omsk, **Russia**
- Aleksey A. Ruppel** PhD, Technical Science, Associate Professor, Siberian State Automobile and Road Academy (SibADI), Omsk, **Russia**
- Senge S. Yampilov** Professor of Department “Biomedical Engineering: Processes and Equipment for Food Production”, Doctor of Technical Sciences, Ulan-Ude, **Russia**
- Vladimir I. Gololobov** Head of Laboratory in NIPS, PhD, Novosibirsk, **Russia**
- Konstantin V. Zmeu** Associate Professor, PhD., Head of the Department of Technology of Industrial Production, the Engineering School of the Far Eastern Federal University, Vladivostok, **Russia**
- Oleg V. Stukach** Dr. of Sci., Professor is with National Research University "Higher school of Economics" and Novosibirsk State Technical University, **Tomsk – Novosibirsk – Moscow, Russia**

- Aleksey D. Pripadchev** Professor, Doctor of Technical Sciences, Head of the Department of Flying Apparatus of Orenburg State University, Aero-Space Institute, Orenburg, **Russia**
- Victor P. Melchinov** PhD., Assistant Professor, Head of the Department of Radiotechniques and Information Technologies of North-West Federal University honored to M.K. Ammosov, Yakutsk, **Russia**
- Vyacheslav N. Fyodorov** PhD., Assistant Professor, Department of Radiotechniques and Information Technologies of North-West Federal University honored to M.K. Ammosov, Yakutsk, **Russia**
- Ulyana A. Mikhalyova** PhD., Assistant Professor, Head of the Department “Multi-Channel Telecommunication Systems” of Technology Institute of North-West Federal University honored to M.K. Ammosov, Yakutsk, **Russia**
- Anastasiya Stotskaya** PhD., Assistant Professor, Deputy Head of Automatic control system department, Saint-Petersburg Electrotechnical University (ETU LETI), Saint-Petersburg, **Russia**
- Anastasiya Rusina** Professor of the Department of Automated Electrical and Power Systems of NSRU, Doctor of Technical Sciences, Novosibirsk, **Russia**
- Olga Dolinina** Director of the Institute of Applied Information Technologies (InPIT), Saratov State Technical University named after Yu.A. Gagarin, Dr. of Techn. Sciences, Professor, Saratov, **Russia**.
- Michail V. Kalinin** Content manager, NIPS, Novosibirsk, **Russia**

# Information Technology for Monitoring Young Patients with Diabetes Mellitus

N. A. Zholdas, M.E. Mansurova

Kazakh National University. al-Farabi, Almaty, Kazakhstan

*Abstract:* The article is devoted to the technical means of monitoring the sugar level in patients. Many similar systems are known for measuring and monitoring blood sugar levels. The list of tasks they solve includes actively monitoring blood glucose levels and monitoring physical activity, diet and insulin consumption. Recent advances in diabetes technology and self-management applications have made it easier for patients to access relevant data. The capabilities of the Internet of Things (IoT), information and communication technologies and machine learning help optimize costs in healthcare and the organization of online medical services. Techniques such as predicting blood glucose (personalized profile modeling) and modeling blood glucose dynamics are key in developing technologies for monitoring patients with diabetes. Increasing the availability of sufficient historical patient data has paved the way for the introduction of machine learning and its use in diabetes management. Machine learning's ability to solve complex problems in a dynamic environment and knowledge has contributed to its success in diabetes research. Globally, the number of cases of diabetes among children is increasing, so monitoring of young patients is a hot topic. Therefore, this review is mainly aimed at finding the optimal structure for monitoring the condition of young patients with diabetes; such a system should have a number of distinctive features, about which practically no information has been found in the literature, which determines the novelty of this article.

*Key words:* glucose monitoring, diabetes mellitus, Internet of Things, sensor, machine learning, neural networks, big data, glucose prediction.

# Modification of the Method for Calculating the PID Controller for a Second-Order Oscillatory Plant with Delay

*Bui Van Tam*

Novosibirsk State Technical University, Novosibirsk, Russia

*Abstract:* This paper solves the problem of controlling an object prone to vibrations. The object model is a sequential inclusion of a second-order filter (oscillatory link) and a pure retardation link. Such objects are especially difficult to control, since oscillations of large amplitude arise in the transient process, which do not damp for a long time, this leads to multiple overshoots. The article solves the problem of overshoot elimination. The results are confirmed by modeling.

*Key words:* automation, control, regulator, optimization, dynamic error, static error, modeling

# Introduction to Unified Field Theory

V.A. Zhmud

Novosibirsk State Technical University, Novosibirsk, Russia

*Abstract.* This paper continues an attempt to understand the advantages and disadvantages of modern concepts of physics, astrophysics, and philosophy of natural science. The author cannot come to terms with the fact that clearly identified contradictions and clearly anti-scientific statements are firmly rooted in modern worldviews. One should exclude, at least, those ideas, the error of which is obvious and proved many times, despite the ignorance of these facts by the bulk of relativists.

*Key words:* electromagnetic radiation, field interaction, field theory, light, corpuscular theory, wave theory, dual nature of light, relativity, relativism

# Development of Ideas of a Unified Field Theory and Field Interaction

V.A. Zhmud

Novosibirsk State Technical University, Novosibirsk, Russia

*Abstract.* The main ideas of the proposed field theory are presented in a number of publications by the author. These publications could cause a heated discussion, or complete disregard on the part of representatives of official physics and astrophysics, since the proposed view ignores the generally accepted theory of relativity (its two parts, special and general), quantum physics, the dual nature of light and particles, as well as the statement about the absence luminiferous medium - ether. Some articles from this series have been republished by other sites, some articles have been published in conference proceedings included in the Scopus databases, but in general, representatives of official physics either do not know about such publications or ignore them. All the responses met, both positive and negative, were received mainly from non-specialists in this area, therefore, most of the comments and responses do not provide such information or such comments that should be answered in detail, or as a result of which it would be necessary to radically revise the proposed theory. A number of questions required clarification, which was the basis for writing this article.

*Key words:* methods of science, logic, experiment, proof, physics, systems theory, automation

# Relativism in the View of its Use of Criteria for the Truth of Scientific Hypotheses

V.A. Zhmud

Novosibirsk State Technical University, Novosibirsk, Russia

*Abstract.* The question of the criteria for the validity of scientific hypotheses remains one of the most important for the further development of science. If these criteria were indisputable and equally understood by all researchers, scientific discussions would be extremely simple, concise and effective. Lenin's definition that the criterion of truth is socio-historical practice, apparently, no longer enjoys such authority as in the Soviet period, however, science has not yet proposed another, more reliable criterion of truth. In publications of relativistic literature, the role of such a criterion is played by genius and the intuition of a truly brilliant scientist, unfortunately, no clearer criteria have been found in this literature. It is impossible to agree with this state of affairs in any way, since the concept of "genius", like the concept of "authority", has nothing to do with science, the concept of "intuition" has no formal differences from the concepts of "fantasy", insight can be both genius and erroneous, science should not be based on such shaky arguments. This article continues the topic of finding reliable criteria for truth and exposing unreliable speculative statements that are refuted by experimental information and logic.

*Key words:* methods of science, logic, experiment, thought experiment, proof, physics, systems theory, automation

# Systems Approach to the interpretation of Hubble's Law

V.A. Zhmud

Novosibirsk State Technical University, Novosibirsk, Russia

*Abstract.* The article argues views about the stationarity of the Universe. The big bang theory leads to religiosity in science. Modern authors, developing the theory of the structure of the Universe in this direction, resort to more and more unsubstantiated hypotheses in order to create at least the appearance of logical connections between the theses put forward, but still the resulting theory includes less and less reliable physical and astronomical information and more and more conjectures and mathematical models taken at random and by dubious analogies, which are further calculated for different initial conditions and are used as analogies of realities that do not actually exist and have never existed. Thus, the whole picture of the modern concept of the Universe gradually became completely fantastic. The problem of this situation lies not in the fact that the creators of new theories suffer from an excess of fantasy, since fantasy in itself cannot harm science, the problem is in the absence of reliable criteria for the scientific nature of these fantasies, as well as in the absence of a general vision of the situation. Most of the objections to the alternative theory of a stationary, non-expanding Universe are aimed at exposing the assumption that light quanta can lose their energy, while the supporters of the Big Bang theory do not even admit the idea that it is possible to abandon the quantum theory of light as an insufficiently substantiated hypothesis, and return to the purely wave nature of light, from which the redshift, which is the essence of the Hubble effect, is explained most simply by the scattering of the energy of the light wave. In this approach, the picture of the Universe is the most reliable, harmonious and rational, it does not require fantastic hypotheses to justify its development, since the development of such a Universe does not include its expansion, and all other processes have real physical reasons.

*Key words:* methods of science, logic, experiment, thought experiment, proof, physics, systems theory, automation

# Overview of Current Trends in the Field of Virtual Reality

M.P. Larin

Novosibirsk State Technical University, Novosibirsk, Russia

*Abstract.* The virtual reality industry has been booming in recent years. The proliferation of affordable personal VR headsets has enabled the use of this technology in many different areas of human activity. Due to the relative "youth" of this direction, it would not be entirely correct to talk about the information technology sector formed to the end. The market of relevant applications is still quite small in comparison with "classic" applications. Nevertheless, there is already a fairly large amount of research work devoted to the practical implementation and application of virtual reality, as well as the difficulties that arise in the process. This article is devoted to an overview of the current state of the VR segment of information technology – the directions of technology development that have been formed to date, as well as the difficulties faced by developers who have chosen VR as their main platform. This article discusses examples of the use of virtual reality in various fields of activity: in the educational process, medical practice, tourism, geology, three-dimensional editors, various simulators that simulate vehicles. It also describes specific applications of this technology, such as the development of a virtual office environment designed for remote work. In addition, the article mentions specific problems that users face when using VR applications. So, in particular, the phenomenon of the so-called "cyber device", which is a form of motion sickness and occurs when using a VR headset. The issue of security of using VR-devices connected to the Internet, in particular, information security related to the possibility of personal data leakage, was raised.

*Key words:* virtual reality, immersiveness, learning process, cyber device, VR headset.

## To the authors of the scientific international journal AiPI: ethics of scientific publications and discussions in the journal (editorial)

V.A. Zhmud

Novosibirsk State Technical University, Novosibirsk, Russia  
Novosibirsk Institute of Software Systems

*Abstract:* Starting from this issue, the editorial board of the AiPI journal ceases to publish regularly at the end of each issue of the section for authors. This is due to the fact that the requirements for publications have finally crystallized, and in the last few years the journal has published requirements for submitted articles almost unchanged with only minor editorial changes. Nevertheless, the situation in the world scientific space is constantly changing, ethical and other principles are updated more often than once a year. Placing such requirements on the journal's website is not enough, changes in this section do not always attract the attention of authors. The editors draw attention to the systematic failure of the authors to comply with the formatting requirements and other rules of our journal, which we put forward for authors who send their articles to our journal. This editorial provides information for authors that the editorial board sees as important, and which the editorial board asks to keep in mind only the authors, but also the readers of our journal. We draw the readers' attention to the information about publications in the discussion rank.

*Keywords:* scientific publication, science criteria, ethics of scientific publications
